Stoneshard: Prologue activation key generator

Q: How to get values form objects inside of Vue's rendered I have situation like this: `data(){ return{ message: { message: "", message2: false } } rendered(){ return this.message.message }`  It will get me message, but then I'm going to need to get message2 and filter it properly. How can I do it in Vue?

A: You can use the v-for directive to iterate over your message object's properties. Here is a simple example: `var vm = new Vue({ el: "#app", data: { message: { message: "", message2: false }, someOtherMessage: false }, computed: { messageSorted: function() { let message = this.message; let sortedMessages = message.sort(); return sortedMessages; } } });` `{{ message.message }}`
