

# *Difference Between Mifepristone and Misoprostol Pills*

# *Abortion Pills Mifepristone and Misoprostol: Find Out the Difference Between the Two*

Abortion Pills are of many sorts, but the two main active ingredients or tablets that help in **medical abortion** are mifepristone and misoprostol.

Both are FDA-approved and can be easily acquired online. They are 95-99% effective if used under the proper guidance. You can buy mifepristone and misoprostol kit online from our safe and legal website at affordable rates.

# *What is Mifepristone?*

**Mifepristone** is a drug usually used in a combination with misoprostol to terminate an early pregnancy. It blocks the female hormone (progesterone) hence sustaining the pregnancy to grow further.

## ***What is Misoprostol?***

**Misoprostol**, a synthetic prostaglandin primarily used as an antiulcer, is also an abortion pill that works best with mifepristone to terminate an early pregnancy (5–12 weeks).

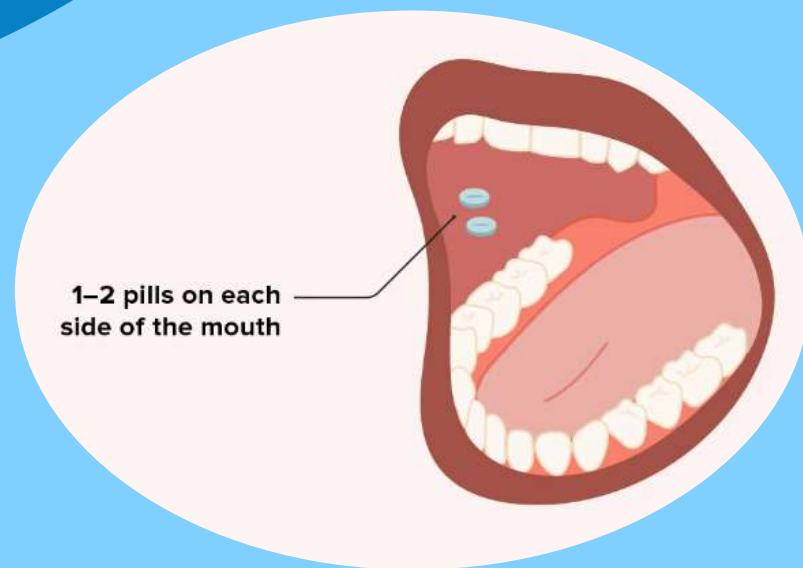

## ***Dosage of Mifepristone and Misoprostol***

*If you buy Mifepristone and Misoprostol kit online or you **buy. MTP kit online**, you will get a single pill of Mifepristone and four pills of Misoprostol.*

## ***Dosage of Mifepristone***

The standard dosage of Mifepristone is one single pill of 200 mg with water after you take food.

## ***Dosage of Misoprostol***

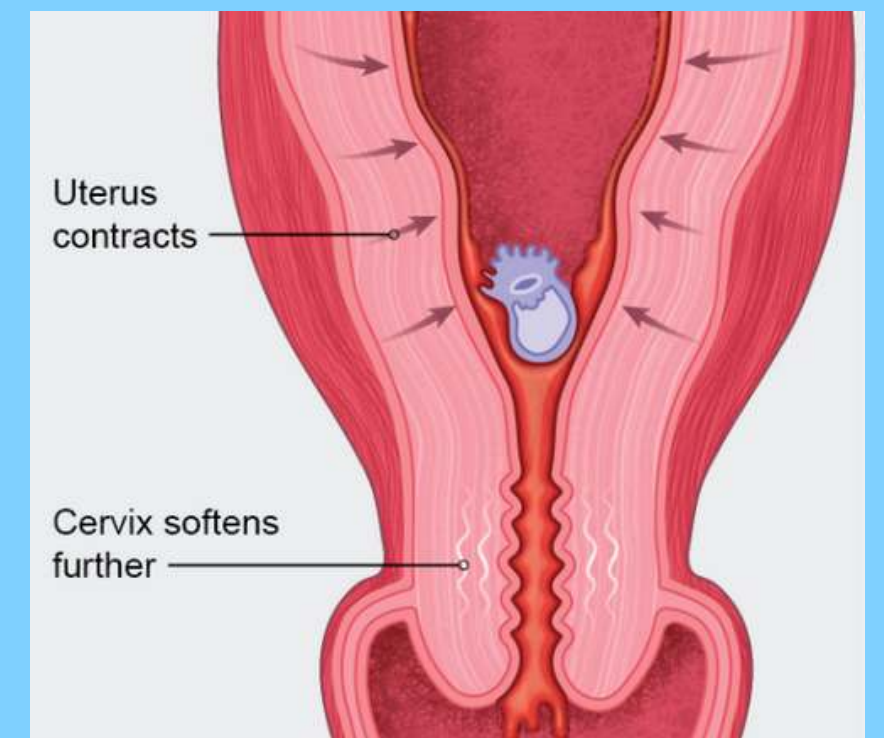

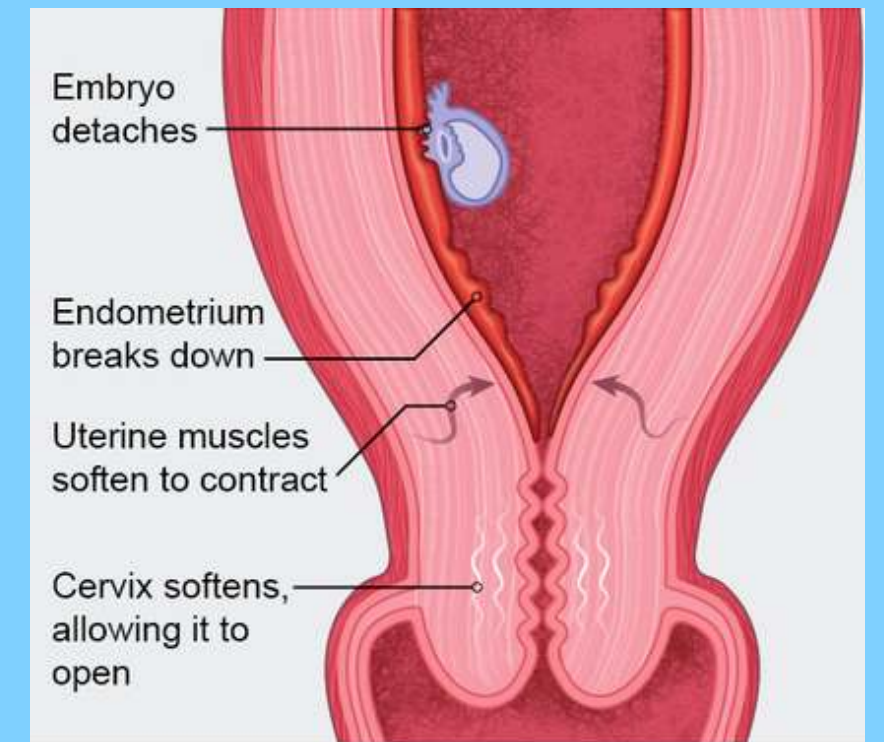

The standard dosage of Misoprostol is taking four pills (each 200 mcg) at once or after every 3 hours. Take it orally or by putting it in your vagina.

# ***Functions of Mifepristone and Misoprostol***

Mifepristone and Misoprostol, both are very essential in order to terminate a pregnancy. You get the best results when they are used in a combination.

**Function of Mifepristone:** It blocks the production of progesterone in the body and separates the pregnancy material from the uterus lining and sheds the lining as well, hence stopping the growth of pregnancy.

**Function of Misoprostol:** Once you consume misoprostol, it will cause your uterus to contract (bad cramps) and dilate your cervix to easily push out the remaining pregnancy tissue out of your body.

# *Side Effects of Mifepristone and Misoprostol*

All medications have some sort of side effects, similarly abortion pills too have some mild side effects during the process of medical abortion.

**Side Effects of Mifepristone:** After you take mifepristone you will have side effects like vaginal bleeding and light spotting.

**Side Effects of Misoprostol:** After taking misoprostol you will experience side effects like headache, fatigue, nausea, diarrhea, stomach cramps, and dizziness.
